

SUN-RS® Gen.1 advantage

- Efficiency: Simply designed with highly robust PCHEs and NO rotating machine required
- Reliability: BOG stream and LNG stream are separated

SUN-RS® Gen.2 advantage

- Compared to the Gen.1**
- Recondensed BOG can be utilized for M/E fuel
 - More recondensing amount achievable

Pre-cooler

Main Equipment

- One (1) BOG pre-cooler PCHE
 - Temperature: -165/40°C
 - Design Pressure: BOG-side 15 / LNG-side 350 barG
- One (1) BOG Recondenser PCHE
 - Temperature: -165/40°C
 - Design Pressure: BOG-side 15 / LNG-side 150 barG
- One (1) Control valve
- One (1) Flow control (option)

Reliable and Safe Design

- Using LNG COLD POWER to recondenser BOG
- Simple and highly reliable design

Energy Efficiency

- Using BOG as fuel for either M/E or G/E, Boiler
- Providing additional BOG handling method

Product Line-up

Series	LNG consumption in engine	HX Type	Cooling duty		Recondensing amount
			BOG pre-cooler	Recondenser	
SUN-RS® 2000	2,000 kg/h	PCHE	20 kW	30 kW	210 kg/h
SUN-RS® 4000	4,000 kg/h	PCHE	45 kW	75 kW	470 kg/h
SUN-RS® 6000	6,000 kg/h	PCHE	70 kW	115 kW	730 kg/h

Fluid

- BOG (Boil Off Gas)
- LNG (Liquified Natural Gas) : Cooling medium

Recondensing Capacity

- Abt. 10~13% of M/E LNG consumption

Maintenance

- No major periodic replacement required

BOG Compressor System

Efficient Design

- High-efficiency rotor design
- Compact and robust system design

Reliable and Safe Design

- High-performance bearings and hydraulic axial force compensation for long-lifetime
- Standardized and hermetically sealed slide position indicator

Reliable and Safe Design

- High efficiency and compact footprint
- Bare compressor supplied by market proven suppliers
- Slide valve control and less control valves
- Control integrated into FGSS control system

System specification

- Type: Oil-injected Screw Compressor
 - Fluid: Boil Off Gas (CH₄, N₂, etc.)
 - Capacity: 300~1,000 kg/h
 - Discharge pressure: ~16 barG
- Suction/Discharge temperature: 10 / 45°C
 - Load control by: Slide valve and/or VFD
 - Heat exchanger: Gas intercooler and oil cooler
 - Oil content: <0.01 mg/m³ (complying with DF engine requirement)

Product Line-up

Series	Swept volume (m³/h)			Max. design pressor (barG)	Load control
	2940 rpm	3550 rpm	4500 rpm		
SC-300	321	388	491	28	Slide valve and/or VFD
SC-350	372	449	569	28	Slide valve and/or VFD
SC-400	471	569	721	28/52	Slide valve and/or VFD
SC-450	471	569	721	28/52	Slide valve and/or VFD
SC-600	708	855	1084	28/52	Slide valve and/or VFD
SC-800	805	972	-	28/52	Slide valve and/or VFD
SC-1000	1290	1558	-	28/52	Slide valve and/or VFD

FGSS Control/ESDS System

- ✔ Smart web diagnosis

✔ Central data storage

✔ Smart management for major equipment
- ✔ Remote program update

✔ Real-time monitoring & Fast CPU cycle time

✔ Interface with programming environment (AMS & LC)

The control system runs on a DCS (Distributed Control System) with having a various controllers handling a given I/O module simultaneously.
